Hi Professor Perry.

I took the Encryption and Authentication course with you in the Fall 2017 and enjoyed the course and the new knowledge gained from it. I am wondering if you would be able to be an advisor to a research project I am working on for BIOL 59000 Data Science Project for Life Sciences?

My research is on gene expression data to find if the top genes differentially expressed in current studies are the same ubiquitous genes found in other ethnic specific population studies using R and Bioconductor. I need an advisor from the Computational Sciences or Math department and one from Biology. But Professor Sarah Powers is my research advisor for the Biology department.

Please let me know if you can review the work as my advisor and listen to the week 7 presentation.

Thank you so much for your help in this matter.
