To: "Ayala Rodriguez, Dr. Daniel" <ayalada@lewisu.edu>

Good afternoon Professor Ayala.

I was wondering if you could mentor or be a research advisor from the math and computational department for my capstone project in bioinformatics. Please let me know.

I had you a couple of times during my grad school work at Lewis University and you used R in one of the courses. I plan on using R in my coursework for completing the analysis of gene expression data obtained from the gene expression omnibus (GEO) online repository. My work is to determine a non-race specific association of the top genes ubiquitous to uterine leiomyomas in healthy human females as a meta-analysis. I am attaching the proposal and prospectus to my course with Professor Powers in BIOL 59000-Data Science Project for Life Sciences.

The courses I had you as a professor in are all in 2017. The courses are: Math 51000-Math for Data Science and Math 51100-Concepts of Statistics. Both were in the spring semester. My student ID is L30018777.

Thank you and regards,

Janis Corona
